

# ELBERT COUNTY STANDS UP

## ECSU Newsletter | August 23, 2022

### DALLAS SCHROEDER STANDS UP !

Elbert County Clerk and Recorder, Dallas Schroeder, provided a detailed explanation about efforts to preserve the honesty of election results in Elbert County. A large crowd of county residents turned out Thursday August 18 to hear Dallas call for election transparency.

To hear his presentation go to: [www.elbertcounty.granicus.com](http://www.elbertcounty.granicus.com) It is well worth your time to hear directly from an elected official striving for **truth**.

STANDING UP for what you believe, especially if there is risk involved, keeps the majority of civic leaders from “doing the right thing”. Dallas and Elections Manager, Rhonda Braun are two notable exceptions. We support and applaud their determination and courage. Please tell them you appreciate and support them!

### PHOTOS FROM ELBERT COUNTY SELF RELIANCE EXPOSITION 2022

To view photos from the Self Reliance Exposition, go to [www.ElbertCountyStandsUp.com](http://www.ElbertCountyStandsUp.com)

Coming soon will be a list of all Self Reliance vendors with their contact information. We were exceedingly pleased with all our vendor partners! They were wonderful to work with and provided expert information on a wide range of topics!

**FOOD.....a continuing concern ....**

May 15, 2022 was the last educational meeting organized by ECSU.

Our focus was FOOD – the many changes in the traditional food supply system which will impact all of us: drought and deluge; destroyed food processing facilities in recent months; breakdowns in the supply chain; our government urging farmers to produce LESS; and ranchers decreasing their herds to cut rising costs.

FOOD, or rather food shortages, projected crop losses, and much more continues to lead in the independent citizen news.

It was that issue...that meeting that prompted ECSU to undertake the Self Reliance event – to urge and help people to get better prepared for an uncertain future.

# ELBERT COUNTY STANDS UP

## SO LET'S GET UP TO SPEED – A LITTLE LIGHT READING !

As we watched a professional bike race, La Vuelta, a Spanish race which started in the Netherlands several days ago, we noted the protesting Dutch farmers taking full advantage of an international audience. As the cyclists zipped through the rural areas of the Netherlands we noted: a large truck with a big sign: REJECT GREAT RESET; then we saw: a large dump truck with the words painted on the inside bed of the truck: “ No Farmers No Food”, and finally a wonderful display over an entire field of tractors: “We Hope To Keep Feeding You” ! (MW)

## DUTCH FARMERS HAVE HAD ENOUGH. THEY ARE STANDING UP!

The following article is one of many available:

**The Phoney Nitrogen Crisis: The Netherlands Is Ground Zero for Global Famine Agenda. Precipitating “30,000 Farmers Out of Business”**

Government, Bill Gates and the Country’s Agricultural Sector

Global Research, August 20, 2022

[TheCOVIDBlog.com](https://www.thecovidblog.com) 3 August 2022

*Before we dive into this, it’s important to understand nitrogen and its role on Earth. The air human beings breathe is 78% nitrogen, 22% oxygen and 1% other stuff. Humans have been breathing nitrogen throughout their existence on Earth. Most nitrogen in Earth atmosphere is N<sub>2</sub> molecules, which are mostly inert (chemically non-reactive). Nitrogen oxides, such as ammonia (NH<sub>3</sub>) and nitric oxide (NO) are the “bad” nitrogens that climate change people say will kill us all. But not having food will kill us all much quicker.*

Nitrogen oxides are facts of life on Earth. Nitrous oxide (N<sub>2</sub>O), aka “laughing gas” and “whippets,” is the third-most abundant nitrogen oxide in the air, according to the U.S. Environmental Protection Agency. Natural sources of N<sub>2</sub>O, including the oceans and ground soil under natural vegetation, account for 62% of all N<sub>2</sub>O. Nitrogen dioxide (NO<sub>2</sub>) and nitric oxide (NO) are the two most prevalent nitrogen oxides. Most NO<sub>2</sub> comes from tobacco smoke, stoves and heaters. The primary sources of NO are fossil fuel combustion and adding fertilizers to soil.

It’s true that the largest human contribution of nitrogen oxides is agriculture. But a 2017 study by the University of Virginia and The Organic Center found that organic farming (i.e. using manure and compost for fertilizer and no chemical pesticides) reduces new reactive nitrogen emissions by 64% versus “conventional” farming.

# ELBERT COUNTY STANDS UP

Yet less than 1% of U.S. farmland and only 4% of Dutch farmland is certified organic. Meanwhile giant corporations – Monsanto/BASF, DuPont/Dow, and Syngenta/ChemChina – make all those poisonous pesticides and own all seeds planted for foods via patents. These three companies control the entire global farming industry.

If nitrogen oxide emissions were genuinely a global concern, the powers-that-be (TPTB) could simply shut down the foregoing companies and invest in organic farming. But we all know genuine concern for humanity is not, never has been, and never will be a priority for these people.

Dutch farmers fighting against extinction

The **World Economic Forum** is promoting yet another “bug chef.” Joseph Yoon is the founder of Brooklyn Bugs in New York. He travels the country, cooks bugs, caterpillars, etc., and eats them in front of people. Yoon has been in business since 2017. But Klaus and company recently endorsed him as part of The Great Reset agenda of “you’ll eat bugs and like it.”

## **Amish Farm Under Threat From U.S. Federal Government for Refusal to Abandon Traditional Farming Practices**

Amos Miller, the farm's owner, contends that he's preparing food the way God intended — but the United States government doesn't see things that way.

By Jeremy Loffredo, Global Research.ca Aug 23, 2022

***Miller's Organic Farm, located in the remote Amish village of Bird-in-Hand, Pennsylvania, has been around for almost 30 years.***

The farm supplies everything from grass-fed beef and cheese, to raw milk and organic eggs, to dairy from grass-fed water buffalo and all types of produce, all to roughly 4,000 private food club members who pay top dollar for high quality whole food.

# ELBERT COUNTY STANDS UP

The **private food club members** appreciate their freedom to get food from an independent farmer that isn't processing his meat and dairy at U.S. Department of Agriculture facilities, which mandates that food be prepared in ways that Miller's Organic Farm believe make it less nutritious.

Amos Miller, the farm's owner, contends that he's preparing food the way God intended — but the U.S. government doesn't see things that way.

**They recently sent armed federal agents to the farm and demanded he cease operations. The government is also looking to issue more than \$300,000 in fines — a request so steep, it would put the farm out of business.**

This is an attack on Amish religious freedom just 150 miles from Washington D.C.

Making it even more independent, Miller's farm also doesn't use gasoline or fertilizer, and therefore the war between Ukraine and Russia isn't affecting his bottom line, unlike every other farming competitor in the country.

Miller isn't dependent on big industry players or the government, and he's providing healthy food to his community the way he believes God intended. The government is trying to intimidate his operation and shut it down.

If you believe the Amish should have the right to exercise their religious beliefs and their ability to provide healthy food to their community, sign our petition at [LeaveThemAlone.com](http://LeaveThemAlone.com) and I'll personally deliver it to the U.S. Federal Eastern District Court of Pennsylvania.

**WHAT HAPPENED TO THAT LAND OF THE FREE....AND HOME OF THE BRAVE?**
